**DETAILED ACTION**

***Election/Restrictions***

1. Claims 5, 6, 9, and 12 have been joined to the instant application because independent claims 1 and 3 have been found to be allowable.

***Examiner's Amendment***

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dicran Halajian on 12/18/2008.

Claim 5 has been amended to read:

An apparatus according to claim 3, wherein the shear plates extend at angles with respect to each other.

***Allowable Subject Matter***

3. Claims 1-3, 5, 6, and 8-13 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claims 1 and 3 are allowable for teaching an electric shaving apparatus having a housing, a plurality of shaving heads in the housing each comprising a circular shear plate and a rotatable cutting member. A motor included in the housing and a shear plate holder mounted on the housing, the shear plate holder holding the plurality of shear plates. A plurality of drive units, each drive unit extending from a drive rim,

wherein the drive rims of the drive units are suspended for rotation about an axis of rotation. The axes of rotation of the drive rims are oriented at angles relative to each other and diverge from each other in a direction from the drive rim to a coupling end of the drive units.

Claims 2, 5, 6, and 8-13 depend from claim 1 or 3.

Cooksey (U.S Patent No. 3,314,146) teaches (see Figures 1-6) a shaving apparatus comprising a housing (square portion of body holding the motor 10 as seen in Figure 2); a plurality of shaving heads, each comprising a circular shear plate (30) provided with apertures (34); a rotatable cutting member (33) rotates relative to the shear plate (30). A shear plate holder (tapered portion of body holding gears 16-18 and 23 as seen in Figure 2) is mounted to the housing and holds the plurality of shear plates. A motor (10) included in the housing provides power to the blades through a drive structure. The drive structure comprises a plurality of drive units (see Figure 5) that each extend from a drive rim (39) and end at a coupling end (the base of gear 36). The axes of rotation for each drive rim (39) are oriented at various angles relative to each other (see Figure 1) and diverge from each other in a direction from the drive rim (39) to the coupling end. A central gear wheel (16) engages the drive rims. The central gear wheel (16) is rotatable around an axis of rotation that extends between the axes of rotation of the drive rims. Cooksey further teaches (see Figures 1 and 5) a shear plate holder (tapered portion of body holding gears 16-18 and 23 as seen in Figure 2) for holding the shear plates mounted on the housing. The elements can tilt relative to each

other and extend at angles relative to each other. Cooksey however fails to teach both the motor and the plurality of shaving heads being within the housing.

The device of Cooksey is unique in the cutting art because the shaving heads are independent of the housing. This allows the shaving heads device to be movable with the movement of a user's fingers. There would be no reason to place the shaving heads within the housing without destroying the entire concept presented by the device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
